Symbiotic Realities Harriet Dunlop

Symbiotic Realities is based within the botanical gardens and brings nature to life for young people through an immersive and educational virtual reality experience.

Using virtual reality and all the user's senses, Symbiotic Realities takes a user through various ecosystems in nature helping them to understand the effects climate change has on the environment in a fast-forwarded setting.

The experience rebuilds a user's emotional connection to nature which promotes individual changes within communities which has a further future impact of helping the environment's health globally.
