During Climatology class at school and via social media within the Metaverse, students are told about Symbiotic Realities at the Botanical Gardens

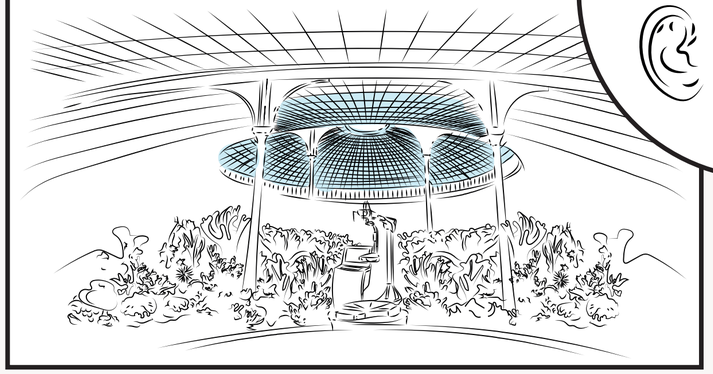

Teams can be made within the Metaverse for the Symbiotic Realities experience which are shown on a map alongside the location of the closest VR base

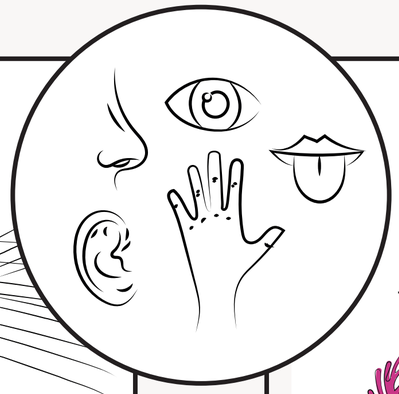

The maps takes the users to the Botanical Gardens with different ecosystem rooms that each have a VR base in.

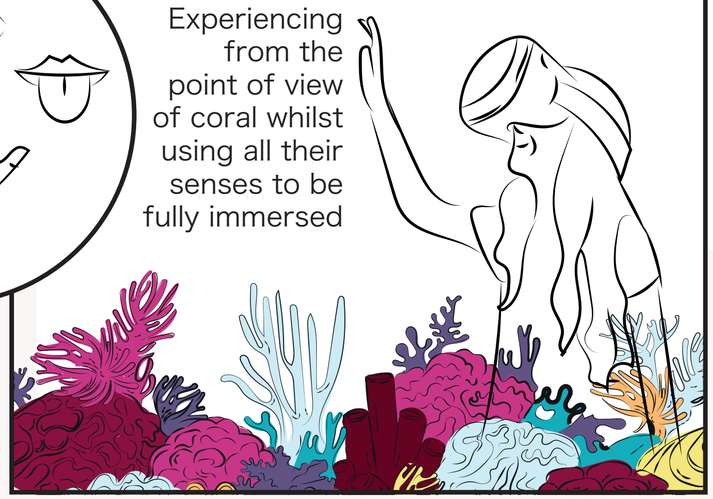

Once found users find the camoflaged VR base, they can sign in together and choose an experience that educates them about climate change

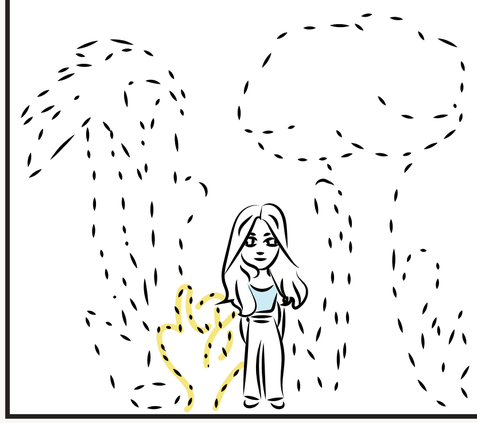

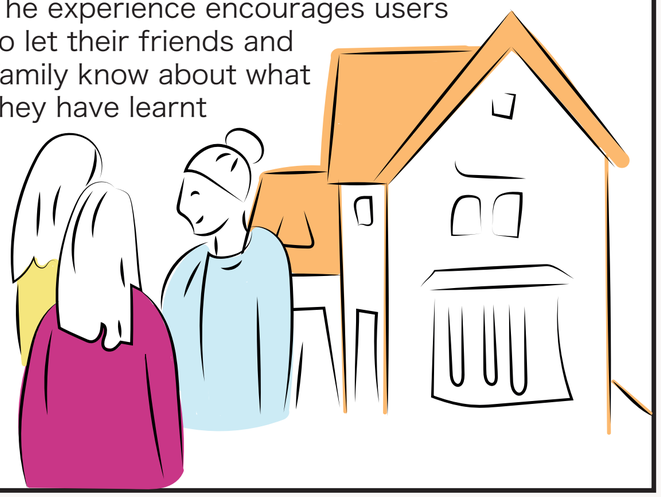

Experiencing from the point of view of coral whilst using all their senses to be fully immersed

When the experience has been completed, each team member recieves Meta merchandise that is added to their social media profile page

The experience encourages users to let their friends and family know about what they have learnt

Symbiotic Realities creates an environmental impact locally through word of mouth. An emotional connection to nature continues into users adulthood life creating a further global impact
